Install Node

```
2. bash
Eamonn-MacBook-Pro:ent-web-2018 edelestar$ node -h
Usage: node [options] [ -e script | script.js | - ] [arguments]
       node inspect script.js [arguments]

Options:
  -                script read from stdin (default if no
                    file name is provided, interactive mode
                    if a tty)
  --               indicate the end of node options
  --abort-on-uncaught-exception
                    aborting instead of exiting causes a
                    core file to be generated for analysis
  -c, --check      syntax check script without executing
  --completion-bash
                    print source-able bash completion
                    script
  -e, --eval=...   evaluate script
  --experimental-modules
                    experimental ES Module support and
                    caching modules
  --experimental-repl-await
                    experimental await keyword support in
                    REPL
  --experimental-vm-modules
                    experimental ES Module support in vm
                    module
  --experimental-worker
                    experimental threaded Worker support
  -h, --help       print node command line options
                  (currently set)
  --icu-data-dir=...
                    set ICU data load path to dir
                    (overrides NODE_ICU_DATA)
  --inspect[=[host:]port]
                    activate inspector on host:port
                    (default: 127.0.0.1:9229)
  --inspect-brk[=[host:]port]
                    activate inspector on host:port and
                    break at start of user script
  --debug-port, --inspect-port=[host:]port
                    set host:port for inspector
  -i, --interactive
                    always enter the REPL even if stdin
                    does not appear to be a terminal
  --loader=...     (with --experimental-modules) use the
                    specified file as a custom loader
  --no-deprecation
                    silence deprecation warnings
  --no-force-async-hooks-checks
                    disable checks for async_hooks
  --no-warnings     silence all process warnings
  --openssl-config=...
                    load OpenSSL configuration from the
                    specified file (overrides OPENSSL_CONF)
  --pending-deprecation
                    emit pending deprecation warnings
  --preserve-symlinks
                    preserve symbolic links when resolving
  --preserve-symlinks-main
                    preserve symbolic links when resolving
```

Command Line Application

3

npm init

package.json

Create a node app

```
mkdir four-square-prj  
cd four-square-prj  
npm init
```

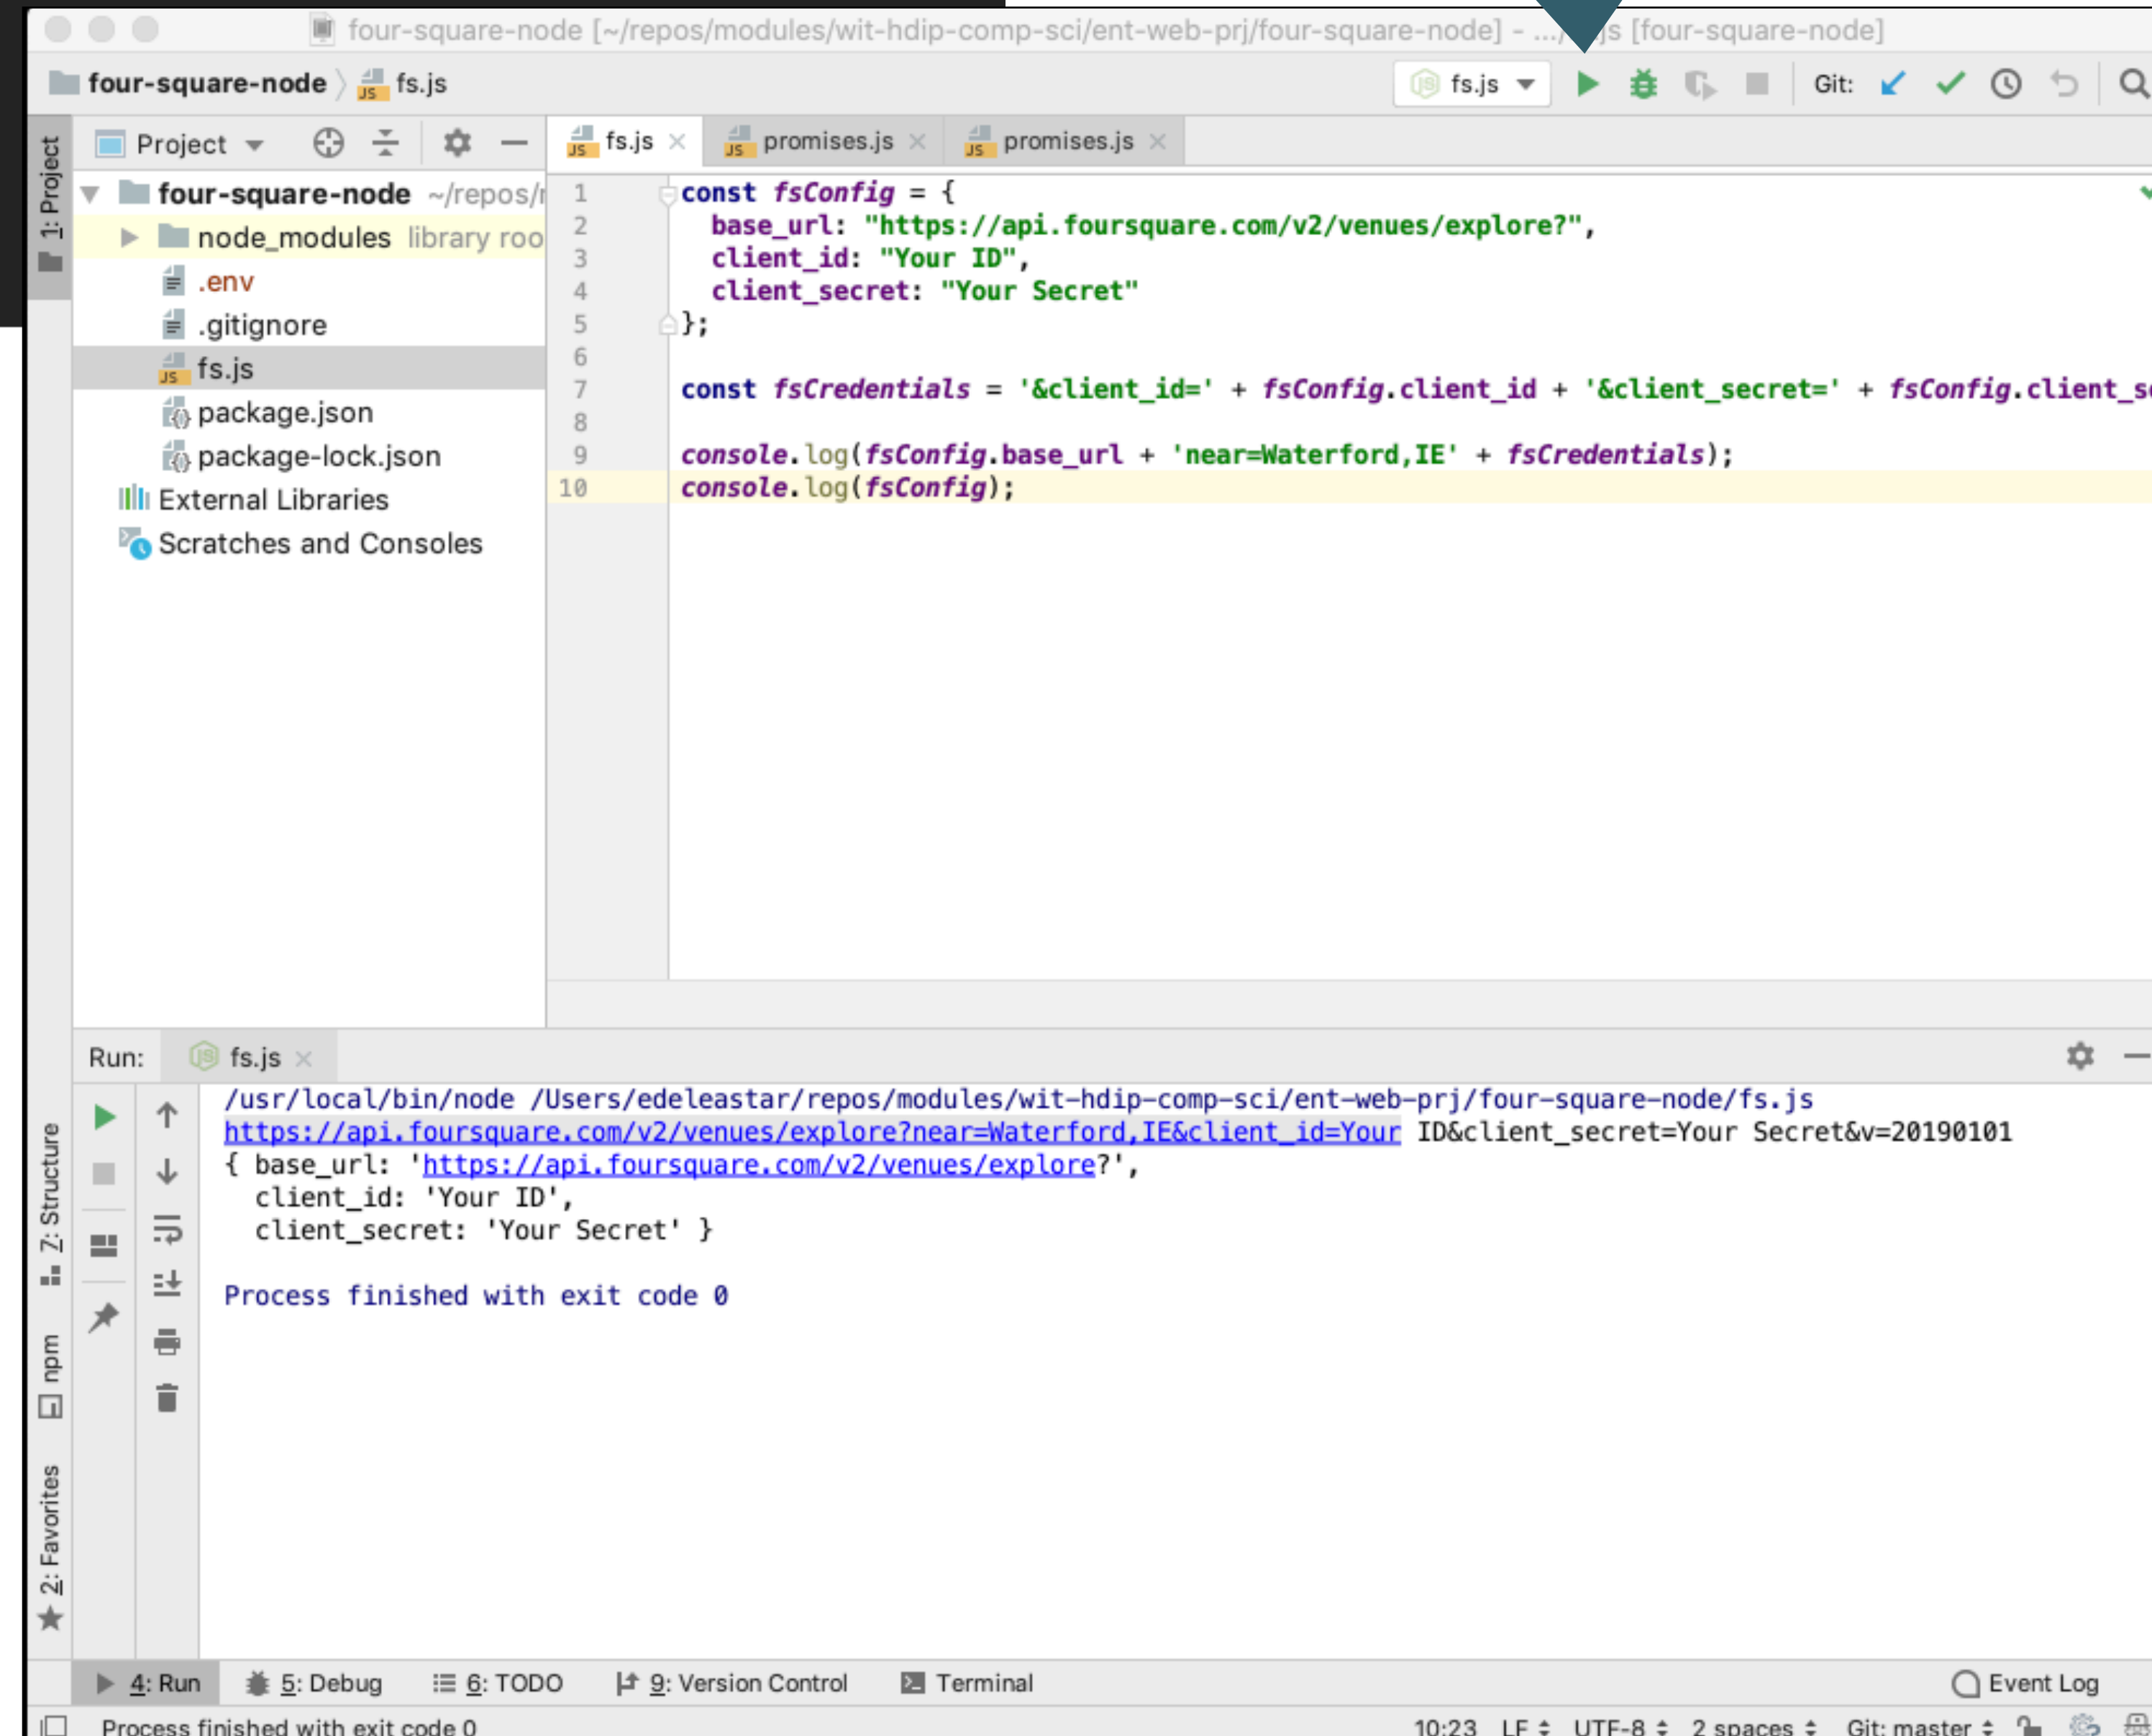

```
{  
  "name": "four-square-prj",  
  "version": "1.0.0",  
  "description": "",  
  "main": "index.js",  
  "scripts": {  
    "test": "echo \"Error: no test specified\" && exit 1"  
  },  
  "author": "",  
  "license": "ISC"  
}
```

Create a Node Application

```
const fsConfig = {  
  base_url: 'https://api.foursquare.com/v2/venues/explore?',  
  client_id: 'Your ID',  
  client_secret: 'Your Secret'  
};  
  
console.log(fsConfig);
```

“Run” the fs.js
program

Build amazing things

npm is the package manager for JavaScript and the world's largest software registry. Discover packages of reusable code — and assemble them in powerful new ways.

Sign up

What is npm?

Use npm to install, share, and distribute code; manage dependencies in your projects; and share & receive feedback with others.

Install npm

What can you make with 800,000 building blocks?

The npm registry hosts the world's largest collection of free, reusable code.

Find

Libraries like **jQuery**, **Bootstrap**, **React**, and **Angular**, and components from frameworks such as **Ember**.

Discover

Packages for mobile, IoT, front end, back end, robotics... everything you need to start building amazing things.

Build

Assemble packages like building blocks to quickly develop awesome new projects.

npm Registry Crosses One Billion Average Daily Downloads

npm, Inc. Bolsters Momentum with New Customer Wins and Portfolio Expansion

September 12, 2018 10:00 AM Eastern Daylight Time

OAKLAND, Calif.--(BUSINESS WIRE)--npm, Inc., which runs the world’s largest software registry and maintains the `npm` software development tool, today announced that the npm Registry has achieved one billion average daily downloads and more than 100 billion downloads in the last 12 months—a 43 percent increase over the prior year.

“Our community’s sustained growth attests to the revolution underway in how everyone—from individual developers to the world’s largest enterprises—develops code.”

The size of the npm community has grown to over 785,000 packages of reusable, modular code shared by over 10 million developers worldwide. Each week, developers publish over 90,000 new versions of software to the npm Registry, and in a recent npm, Inc. [survey](#) of more than 16,000 worldwide developers, 95 percent of respondents report they intend to use JavaScript as much or more over the next 12 months.

“JavaScript is how the world writes software, and npm is how developers write JavaScript,” said npm, Inc. co-founder Isaac Z. Schlueter. “Our community’s sustained growth attests to the revolution underway in how everyone—from individual developers to the world’s largest enterprises—develops code.”

Rolling 28-day downloads

The chart displays the growth of npm's average daily downloads over a five-year period. The y-axis represents the number of downloads, ranging from 0 to 15 billion in increments of 5 billion. The x-axis shows dates from January 1, 2013, to January 1, 2018, with labels every year. The data is represented by a blue line with a light blue shaded area underneath, indicating the volume of downloads over time. The growth is exponential, starting near zero in early 2013 and reaching over 15 billion by late 2018. There is a significant dip in early 2017, followed by a sharp recovery and continued growth.

Date	Rolling 28-day average daily downloads (approximate)
2013-01-01	0
2014-01-01	~100,000,000
2015-01-01	~1,000,000,000
2016-01-01	~3,000,000,000
2017-01-01	~5,000,000,000
2018-01-01	~15,000,000,000

Promise based HTTP client for the browser and node.js

Features

- Make **XMLHttpRequests** from the browser
- Make **http** requests from node.js
- Supports the **Promise** API
- Intercept request and response
- Transform request and response data
- Cancel requests
- Automatic transforms for JSON data
- Client side support for protecting against **XSRF**

  { name: 'Carter\'s Chocolate Cafe' },  
  { name: 'Emilianos' },  
  { name: 'House of Waterford Crystal' },
```

All three
invocations
made....

... responses
arrive out of
sequence.

Alternative to Promises — Async/Await

```
async function loadVenues(location) {
  const response = await axios.get(fsConfig.base_url + location + fsCredentials);
  console.log(`Searching ${location}...`);
  var venues = response.data.response.groups[0].items;
  const venueCollection = [];
  for (let i = 0; i < venues.length; i++) {
    const singleVenue = venues[i].venue;
    const venue = {
      name: singleVenue.name
    };
    venueCollection.push(venue);
  }
  console.log(venueCollection);
}
```

Async/Await

```
async function loadVenues(location) {  
  const response = await axios.get(fsConfig.base_url + location + fsCredentials);  
  console.log(`Searching ${location}...`);  
  var venues = response.data.response.groups[0].items;  
  const venueCollection = [];  
  for (let i = 0; i < venues.length; i++) {  
    const singleVenue = venues[i].venue;  
    const venue = {  
      name: singleVenue.name  
    };  
    venueCollection.push(venue);  
  }  
  console.log(venueCollection);  
}
```

No callback function needed — `axios.get()` function pauses until response arrives
